CLARITY

Installation Guide

clarity.moe • discord.gg/claritymoe

Follow each step in order — do not skip ahead.

Before You Begin

Make sure your system meets these requirements before starting:

Requirement	Details
OS	Windows 10 / 11 (64-bit)
RAM	8 GB minimum, 16 GB recommended
Storage	5 GB free space
GPU	NVIDIA GTX 1060 or newer / AMD RX 580 or newer. Must support DirectX 12. The AI runs via DirectML — not CUDA — so both GPU brands are fully supported.
Internet	Required on first launch for key verification

One-Time Windows Setup

clarity.moe • discord.gg/claritymoe

Complete both steps below **once** on any PC before running installs.bat. Skipping either step is the most common reason Clarity fails to launch on a fresh machine.

Disable Python App Execution Aliases

Windows 10 and 11 include fake "python" shortcuts that open the Microsoft Store instead of running the real Python. installs.bat will not find Python 3.10 correctly until these are turned off.

- Press **Windows + I** to open Settings.
- **Windows 11:** Go to **Apps** → **Advanced app settings** → **App execution aliases.**
- **Windows 10:** Go to **Apps** → **Apps & features**, then scroll down and click **App execution aliases.**
- Find **python.exe** and **python3.exe** in the list and toggle **both OFF.**
- If they are already off or not listed, you are good — continue to the next page.

■ **Note:** If you skip this step, the python command will open the Microsoft Store instead of running Python. installs.bat will report that Python 3.10 is not found even if you have already installed it.

Getting Started

clarity.moe • discord.gg/claritymoe

Step 1 Run installs.bat (first time only)

Right-click **installs.bat** and select **Run as administrator**. This installs Python 3.10 and all required dependencies automatically. You may need to run it up to 3 times to install everything properly.

■ **Note:** installs.bat must be run as Administrator or it will fail to install packages correctly.

Step 2 Run run.bat (every launch)

Right-click **run.bat** and select **Run as administrator**. This is how you launch Clarity every time. A console window will open showing the Clarity banner — wait a moment and the key window will appear.

■ **Note:** Always run as Administrator. The aimbot input methods require elevated privileges to function.

Step 3 Enter Your Key

Paste your key into the box and click the correct verify button for your key type:

Getting a Free Key

- Click the **Get Free Key** button — your browser will open automatically.
- Complete the steps on the page that opens and copy the key that is generated.
- Paste it into the key box and click **Free Verify**.

Using a Paid Key

- Paste your license key into the box and click **Paid Verify**.

✔ **Tip:** Your key is saved automatically after the first successful login. You will not need to re-enter it for 24 hours. To reset your key, delete **extra\key.json** and relaunch.

■ **Note:** Your game must be running in bordered fullscreen with the crosshair centred on screen. Most users play through a browser — this is fine. Just make sure the game window is centred and not offset to one side.

■ **Note:** Discord support tickets are for paid customers only. If you are on the free version, please do not open a ticket. Upgrade to lifetime access for $50 at clarity.moe.

Problem	Fix
Clarity crashes silently with no error	The Microsoft Visual C++ Redistributable (x64) is missing — the core module needs it to load. installs.bat installs it automatically, so re-run installs.bat as administrator. If it persists, install it manually from aka.ms/vs/17/release/vc_redist.x64.exe, then restart your PC and relaunch Clarity.
installs.bat says "Python 3.10 not found" even after installing Python	Windows is intercepting the python command and opening the Microsoft Store instead. Go to Settings > Apps > Advanced app settings > App execution aliases and turn OFF both python.exe and python3.exe, then re-run installs.bat.
Key is invalid / not accepted	Delete extra\key.json and relaunch to re-enter your key. Make sure there are no extra spaces. Use Free Verify for free keys and Paid Verify for purchased keys.
Clarity closes immediately on launch	Right-click run.bat and select Run as Administrator, then try again.
installs.bat fails or errors	Make sure you right-clicked and selected Run as Administrator. Antivirus may also block pip — temporarily disable it and retry.
'Failure loading model' in console	The model file is missing or corrupted. Make sure the extra\ folder contains the .onnx model files and they have not been renamed or deleted.
MAKCU / mouse not connecting	Tick the Initialise Makcu checkbox in the loader and press Start. If it still fails, check your USB connection and try a different port.
AI running on CPU instead of GPU	Make sure your GPU supports DirectX 12. The AI uses DirectML — not CUDA — so NVIDIA and AMD are both supported. Update your GPU drivers if unsure.
AMD GPU — low / unstable AI FPS	Open AMD Software and raise your minimum GPU/core frequency. If your max is e.g. 2150 MHz, set the minimum to 2100 MHz to prevent downclocking.
Target boxes / tracers tank FPS	This is expected — the overlay redraws every frame. Disable Target Boxes and Target Tracers in the Visuals tab for maximum AI FPS.

AI not detecting anything	Make sure your game is in bordered fullscreen and centred on screen. Also check that Confidence is not set too high (try 1–5).
